

Rapid-Rate Thermal Cycle Chamber

TCC-151W

A thermal cycle chamber that achieves a temperature change rate of 23K/min and specimen temperature ramp control of 15K/min

This thermal cycle chamber can be rapidly changed air temperature while controlling specimen temperature for the way such as JEDEC standard and screening. It features a built-in web application that can be used to operate the chamber from a PC or tablet. This web application allows you to check the status of the chamber remotely using a web browser.

Rapid-Rate Thermal Cycle Chamber

TCC-151W

* Shown are equipped with options.

AR - Rapid-Rate Temperature Cycle Type (Up to 15K/min)

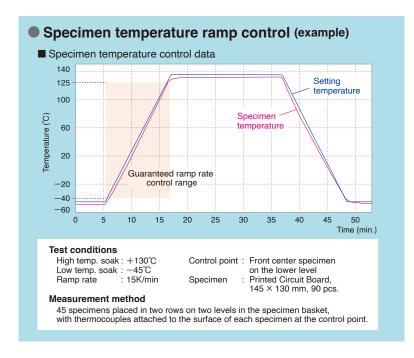

*Temperature types (ARGF and ARG) are not equipped with a water tank.

High-Rate Thermal Cycle Chamber HRG (Up to 25K/min)

Performance

For accurate life evaluation testing that meets JEDEC standard

Distribution performance during temperature changes (example) ■ Distribution data during temperature changes 120 100 80 60 **Temperature** 40 20 0 -20 -40 10 20 30 40 ■ Temperature rate of change at twelve measuring points (Average) * Conforms to IEC60068-3-5: 2001 (K/min) For temperature heat up: 13.9K/min to 15.1K/min 20 For temperature pull down: 14.9K/min to 15.4K/min rate of change **Test conditions** High temp. soak : +125°C Specimen: Printed Circuit Board. Low temp. soak : -40°C 145 × 130 mm, Ramp rate : 15K/min 90 pcs Control point : Air outlet sensor Measurement method As shown on the right, thermocouples are attached to the specimens at twelve measuring points.

Fatigue life depends on the rate of strain and the strain waveform. In the case of thermal cycle chambers, the strain rate fluctuates based on the temperature change rate, while the strain waveform is influenced by the symmetry of the specimen temperature change waveform during temperature increase and decrease.

Highly reproducible ramp control

Using the TCC specimen temperature ramp control, the ramp rate can be regulated so that strain waveforms can be symmetrical.

Furthermore, the strain rate can be held constant even if the number of samples is different per test, by maintaining the same ramp rate. This allows tests to be carried out with exceptionally high reproducibility.

Meet JESD22-A104F

Standard tests that require specimen temperature ramp rates of 15K/min or less (-40°C to + 125°C) can be carried out with ease and accuracy.

In addition, this chamber is also designed to execute tests at a temperature change rate of 10K/min to 15K/min as stated in IEC60749-25 and at 15K/min mentioned in JESD22-A104F.

This chamber is ideally suited to automotive test requirements, life assessments for solder joints, and reliability assessments for semiconductor devices and packages.

Maximized temperature uniformity for equal thermal load to the specimen

Performance

Dual-side wiring for enhanced operability

The chamber comes with 25×100 mm oval cable ports on both the left and right sides for the simple wiring of flat cables. The internal dimension of the chamber are W800 \times H500 \times D400 mm, and the capacity is 160 L.

- * Accommodates approximately 60 B5-sized (176 × 250 mm) boards in an upright position.
- The integrated control panel on the door maximizes usable space inside the chamber.

Specimen can be inserted or removed during testing

Testing can be paused upon completion of any given cycle. Specimen can be inserted or removed during testing, enable to reduce overall test time by joint testing.

Conductor resistance evaluations

The TCC can be used in conjunction with the Espec Resistance Evaluation System (AMR) (sold separately) used for continuos measurement of micro resistance of conductor components, such as solder joints under temperature cycle conditions, allowing for real-time detection of micro-crack formation.

In addition, effective scheduling management has been facilitated by the integration of automatic measurement and data logging systems.

Complies with international safety standards

ISO 12100, Safety of machinery IEC 60204-1, Low voltage EMC IEC 61000-6-2, 6-4

Test area

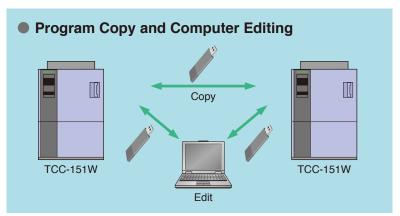

Example of connection between Conductor Resistance Evaluation System (AMR) and TCC

High-resolution 7-inch display

*Some items may not be copied between different models chambers with different options.

Ramp rate input available (patent pending)

The step time can be calculated automatically just by inputting the ramp rate.

Convenient notification function

INFO icon flashes to show chamber information, such as door ajar alarm and whatever you select.

Multi-language support

You can change the language of the controller by pressing the Language icon and choosing the language. You can select from Japanese, English, Traditional Chinese, Simplified Chinese, and Korean.

Test profile copying without a PC

The chamber comes with a USB port that can be used with USB memory devices (not included) to share test profiles with other chambers.

Test-supporting network functions

Remote monitoring and control (via Ethernet connection)

The chamber is equipped with a web application that enables monitoring of the chamber status and operation from a web browser, which ensures operability from a remote location.

Passwords for user-level access can also be set using the web browser.

Editing test profiles via a browser

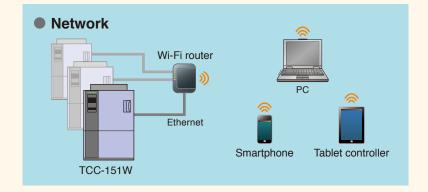

It is possible to edit the test profiles registered in the chamber using a web browser.

Email alarm notification

Details on alarms that have been triggered will be sent to pre-registered e-mail addresses. It is also possible to transmit e-mails when testing has finished.

*An Intranet environment is required to transmit e-mails.

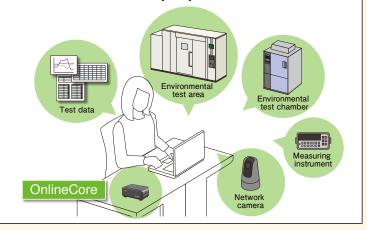

Centralized management of environmental test chambers and peripheral devices

ESPEC OnlineCore (Sold separately)

Operating status can be quickly ascertained via a web browser just by connecting to an Intranet environment. This enables chambers to be managed centrally to enable speedy maintenance, etc.

* Inquire regarding types of models that can be connected.

Safety precautions

- Do not use specimens which are explosive or inflammable, or which contain such substances. To do so could be hazardous, as this may lead to fire or explosion.
- Do not place corrosive materials in the chamber. If corrosive substances or liquid
 is used, the life of the unit may be significantly shortened specifically because of
 the corrosion of stainless steel, resin and silicone materials.
- •Do not place life forms or substances that exceed allowable heat generation.
- •Be sure to read the operation manual before operation.

OPTIONS

Power cable

- 5 m
- 10 m
- * Power cable is optional, not equipped as standard fitting.

Specimen basket / shelf bracket

Equivalent to standard accessory.

· Material: Stainless steel (5 mesh)

Additional cable port

Provided in addition to the standard cable ports. (Right & left sides) Location: Right & left side of the main unit

Internal diameter: ϕ 25 × 100 mm * This cable port cannot be retrofitted on the field.

Cable port rubber plug

Prevents air leakage from the cable

Interface

- · RS-485
- RS-232C
- · GPIB

Location: Terminal panel

Communication cables

· RS-485 5m/10m/30m 2m/4m • GPIB

Paperless recorder

Records temperature of each section such as the temperature inside the chamber.

Display: 5.7inch color touch panel Number of inputs (Initial setting):

2 (4 more channels can be turned ON)

Data saving cycle: 5 seconds Temperature range: -100° C to $+220^{\circ}$ C

Internal memory: 8MB External memory media:

CF memory card (256 MB) External memory function: USB port

Chart recorder

-100°C to +220°C /100 mm

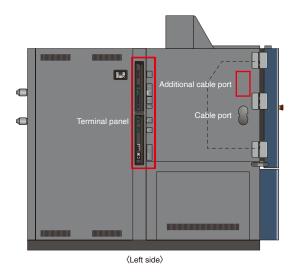

• RK-63: 3 pens · RK-64: 6 dots

Recorder wiring

Preparation of a power cable, temperature sensor, and a grounding wire for additional installation in the future.

Recorder terminal

Used to output the temperature within test area and specimen temperature.

⟨Front⟩

OPTIONS

Thermocouple

Attached to specimens to measure specimen temperature.

- Thermocouple type T without ball (Copper/ Copper-Nickel)
- * Same as accessory items

Temperature attainment output

When the temperature in the chamber reaches the set values, the chamber sends out a contact signal.

Additional overheat protector

Additional preventive measures can be taken for excessive temperature rise in the chamber, in addition to the standard equipped overheat protector.

Overcool protector

If the temperature inside the chamber decreases excessively, the chamber stops operating to prevent the specimens from being damaged.

Door opening signal output terminal

Equips the chamber with a terminal that outputs the door open status.

Capable of controlling an external device that operates along with door operation and records the temperature disturbance history.

Status output terminal

When the chamber is setting operation such as "Error", interlock with connecting devices.

Operation:

When connecting with N.O. contact (normally open contact), output "close" contact.

When connecting with N.C. contact (normally close contact), output "open" contact.

Power supply capacity: 250 V AC, 3 A

Accessory: Plug

Location: Terminal panel Right side or within the control board (retrofit is not available)

*The circuit shall be connected by customer.

Status indicator light

Select light color, lighting, and blinking or buzzer sound.

- 1 level, light: 1 color, height: 534 mm
- 2 levels, light: 2 colors, height: 574 mm
- 3 levels, light: 3 colors, height: 614 mm
- 4 levels, light: 4 colors, height: 654 mm Pole length: 290 mm
- * The pole can be shortened in units of 10 mm to a minimum height of 50 mm.

Emergency stop pushbutton

Stops the chamber immediately.

With guard

With cover

Anchoring fixtures

Used to bolt the chamber to the floor.

Chamber dew tray

Prevents water leaks from the chamber onto the floor.

Image

*To prevent damage in the event of water leakage, other preventive measures are also available.

Casters

Installed for mobility.

Casters: 4

Levelling-feet: 4
